

Presidential Address

My dear Fellow Engineers! SAMTH

All the developed countries are in the race to acquire AI supremacy. They firmly believe that it holds the secrets which will reorganise the life of the world. It is supposed to be a field of fields.

Our national economic stability and security in future will be subject to the competing demands imposed internationally. We have to defend our nation against emerging AI-enabled threats.

It is therefore imperative that an integrated national strategy is prepared to reorient the nation and reorganize the government.

Pakistan Academy of Engineering has taken the initiative to float AI Vision. It is necessary to organise whatever humble knowledge assets we have. The government has to step in strongly to give a policy, plan and budgetary support to the efforts at the national level.
